

8 CRYSTALS

The design area has the potential to become an attractive point for the city; for this reason we wanted to create a place that people could use, a container capable of hosting different social and cultural activities. A new landmark for the city. During daytime, each tower is characterized by a specific theme: at the top floor are located 8 thematic spaces for expositions and cultural events. During nighttime, the 8 crystals are illuminated from the inside and from the outside with projections and colour effects, becoming a picturesque background for cultural events. The towers volume is equilibrated by the lightness of the materials: the glass façade makes the architecture permeable, showing the green inside; the translucent surface lets the sunlight in so that the vertical farm becomes a greenhouse, able to host different species of plants and vegetables, even in winter.
