

inhabitable remediation machine

1:3000

2025 CE

As Copenhagen achieves its goal of carbon neutrality in 2025, the island Refshaleoen gives birth to a machine. This machine not only remediates the soil using biological systems, repairing ecologies and improving overall environmental health, but exposes these processes for all to investigate and learn from, leaving in its wake a more diverse terrain hospitable to a variety of activities and users.
