

[RIPPLE]

EVENT SPACE

Places designed to reinvigorate the body and the mind are not an indulgence in our fast-paced society – they are a necessity. They are event spaces that engage people's exploration, meditation and conversation. Within the frame of various sustainable technologies, we try to seek a balance between natural, industrial and social entities, the in-between form which addresses ecological issues and human interactions in beneficial ways. We imagine a space which naturally integrates into the site. In lieu of a simple harvest of natural power, it is an embracement of nature. Bridging from water to sky, Ripple settles on a curved surface creating a harmonious conversation between the two parallel worlds. It embodies a rhythmic unitized shape inspired by the form of water, which generates electrical energy by harvesting kinetic energy. The experience of approaching the space is carefully calibrated in terms of the sequence of viewing perspectives and angles. Upon arrival visitors are welcomed by the large interactive screen projected on the back of the surface which lively displays the amount of energy being generated onsite. Space shaded under the canopy becomes the kind of urban plaza where people gather and movies are shown at summer nights. The triangular and upward tilted entrance then creates a visual threshold, which narrows down one's focus before being completely exposed to the fluctuating panels, an infinite field of sky and sea.

APPROACHING THE SITE

SEA AND SKY
