

Ø - *danish for Island*

The project is inspired by the Danish Ice age landscape - soft, rounded hills shaped by glaciers. It is also inspired by the many danish ramparts for defense use, like 'Trelleborg' and the neighboring citadel; 'Kastellet'. The circular path on top, will create a fantastic panoramic view over Copenhagen.

Trelleborg

Kastellet

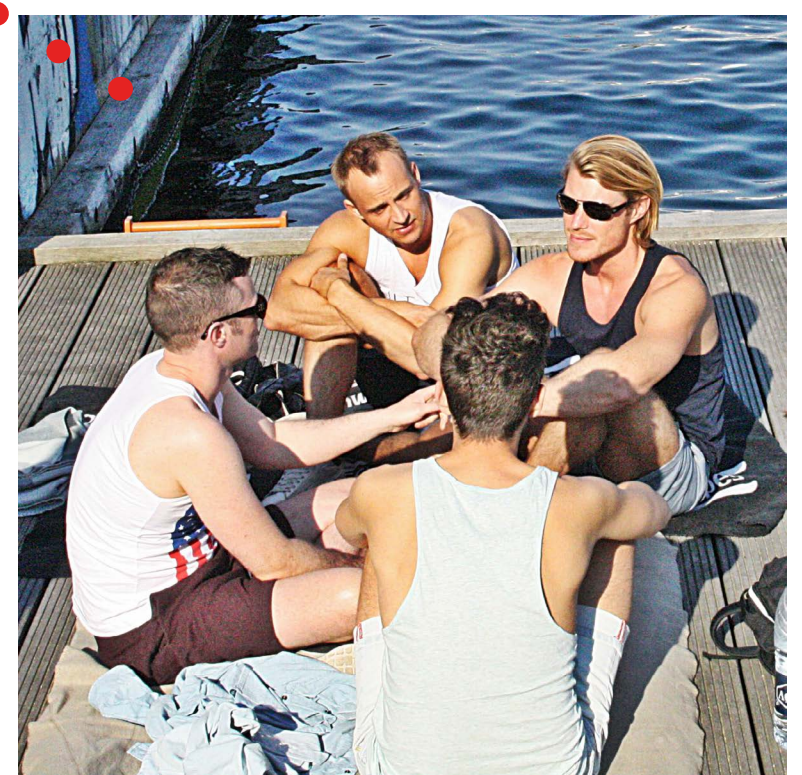

The concept of 'Ø' is to combine green energy production with lots of social and cultural activities. In the large 8000 m2 grass slope there will be space for more than 10.000 guests.

The use of grass and Sedum herbs as the main surfaces, besides of solar panels, gives a clear signal of a green and sustainable structure, which will contribute positively in a global CO2 context.
