

## ONSHORE POWER

the scenic recharging harbour

### DESIGN OUTCOME

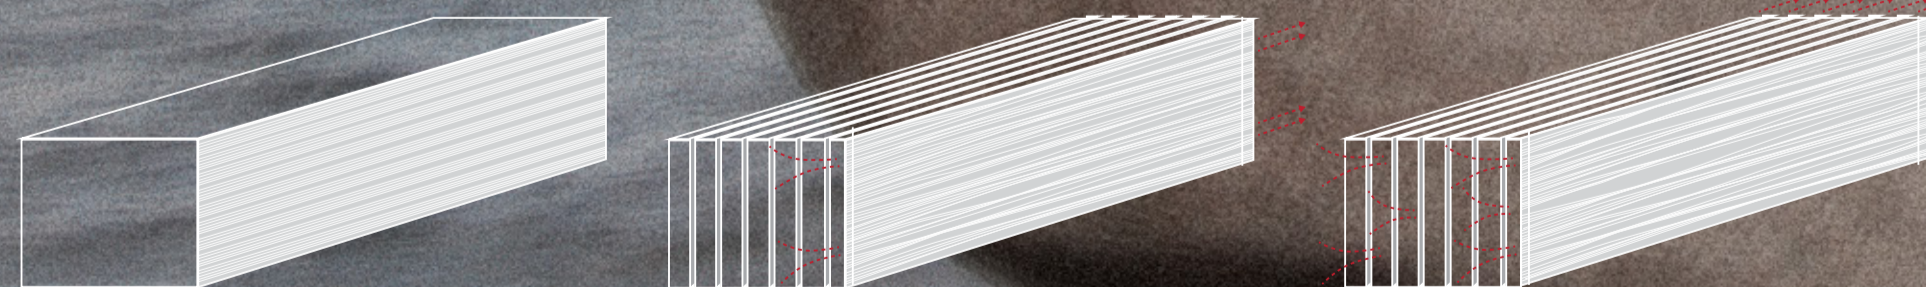

the achievement

This is not a problem-solving design. The advent of *Onshore Power* aims to maximize the existing potential, specifically, to optimize the use of transportation tools on the water. As a result, the popularity of catching a boat would dramatically help to mitigate air pollution and to encourage the use of clean energy. People are the domain role that benefits from this change. Lifestyles and the way of looking at their surroundings would have a revolution - since the mother of nature has formed a variety of landscapes, they have never been the same as how we have been thinking what they are. We all need to learn to sense the wind, the natural power, and the changing landscapes.

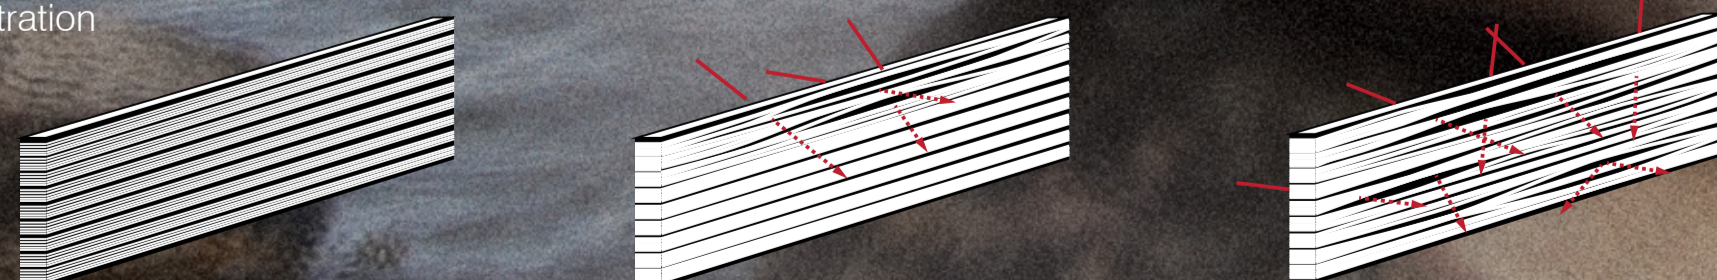

### ADDITIONAL CONCEPT

the new landmark and penetrating views

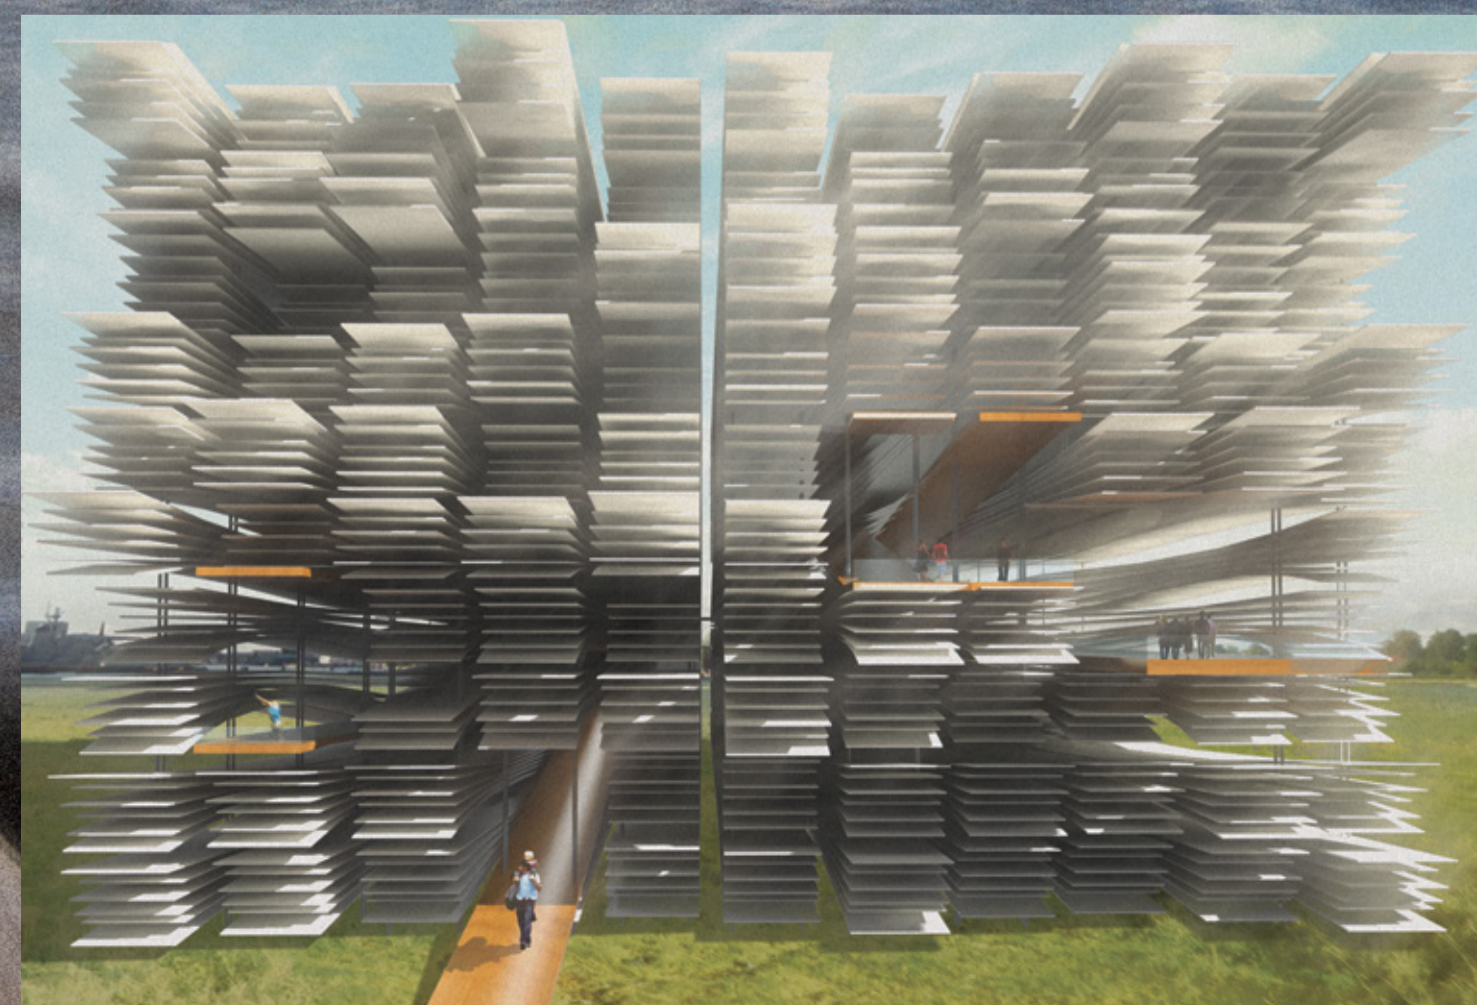

Wind penetration

View penetration
