

Urban Sponge

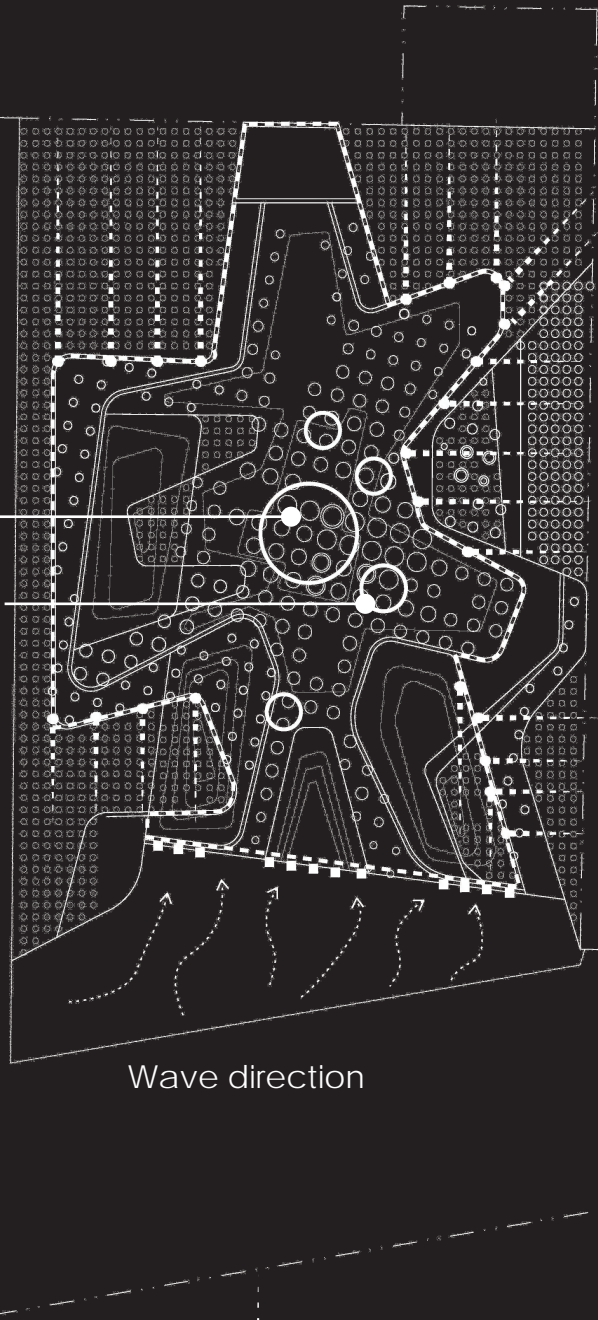

4 Social Plaza

Different ways to generate energy allow a diverse environment for all kinds of activities.

1. Create axis to build the dialogue with little mermaid.
2. Integrate the soft surface with the solid surface as a edge on the urban space and ocean space.
3. Use energy columns and underground energy generator to transfer the tidal energy and gravitational potential energy to electricity.
4. Create multi-energy cores to storage and distribute the electricity.
5. Space with different scale for various activities and different energy form. At the same time, create silent space for people to feel the rhythm of the wave.
