

The Energy Flywheel

The flywheel is intentionally much larger, so visitors can see a visible result of their slow movement as the platform descends under their weight. The rotational movement of the flywheel gives visitors the satisfaction that energy is being created simply by standing.

The LED Screens

Along strategic points in Power Park, digital LED displays inform visitors about electricity production and calories burned. Viewers are educated on their own performance data as well as the performance of other visitors

The Perimeter Path

The effort of walking up to the platform is rewarded as walkers pause to experience the view of the harbor as well as look down upon the rest of the park through the thoughtfully framed views around the perimeter path.
