

available energy

More can be more, can be more. - Every bit of directly consumed energy has to be thought of. With the announcement of a new big solar installation in Fresh Kills Park, NY, the importance of energy storage has been increased indirectly. The economic pressure restrains aesthetically developed energy producing infrastructure. LAGI '14 shall promote the simple technologies to minimize the impact of windmills, solar parks, waste-to-energy plants and other installations on landscape, sea and urban spaces. Growth in number must not be sustainable. Let us keep the natural qualities of our earth's surface.
