

WAVE GENERATOR

- copenhagen

Denmark is a place to surf. The Surf sport is a rising Culture in this Country. So the idea is to develop a windcraft which generates Energy for artificial waves. The wind transforms in a kinetic image of a wind wave to generate water waves, electricity and light. Otherwise the structure serves as a roof and sunshade. The whole Site becomes a kinetic sculpture which generates electric energy and offers a new attraction for Copenhagen. So for everybody it's a place to be. People can chill in the sun, families could have picnic in the Green Spaces and surfers could present their skills to the visitors.
