

This Huge volume has completely empty at first. The type of sphere windmill of three kinds of sizes is going to be dedicated by citizens' contribution towards Copenhagen Carbon Nutral 2025 plan. The production of electricity also increases according to it. Although it cannot generate electricity slightly in the beginning, if was completed, it is not inferior to the conventional windmill.

The sphere windmill has 3 types, S size : 600mm, M size : 1200mm, L size : 2400mm.

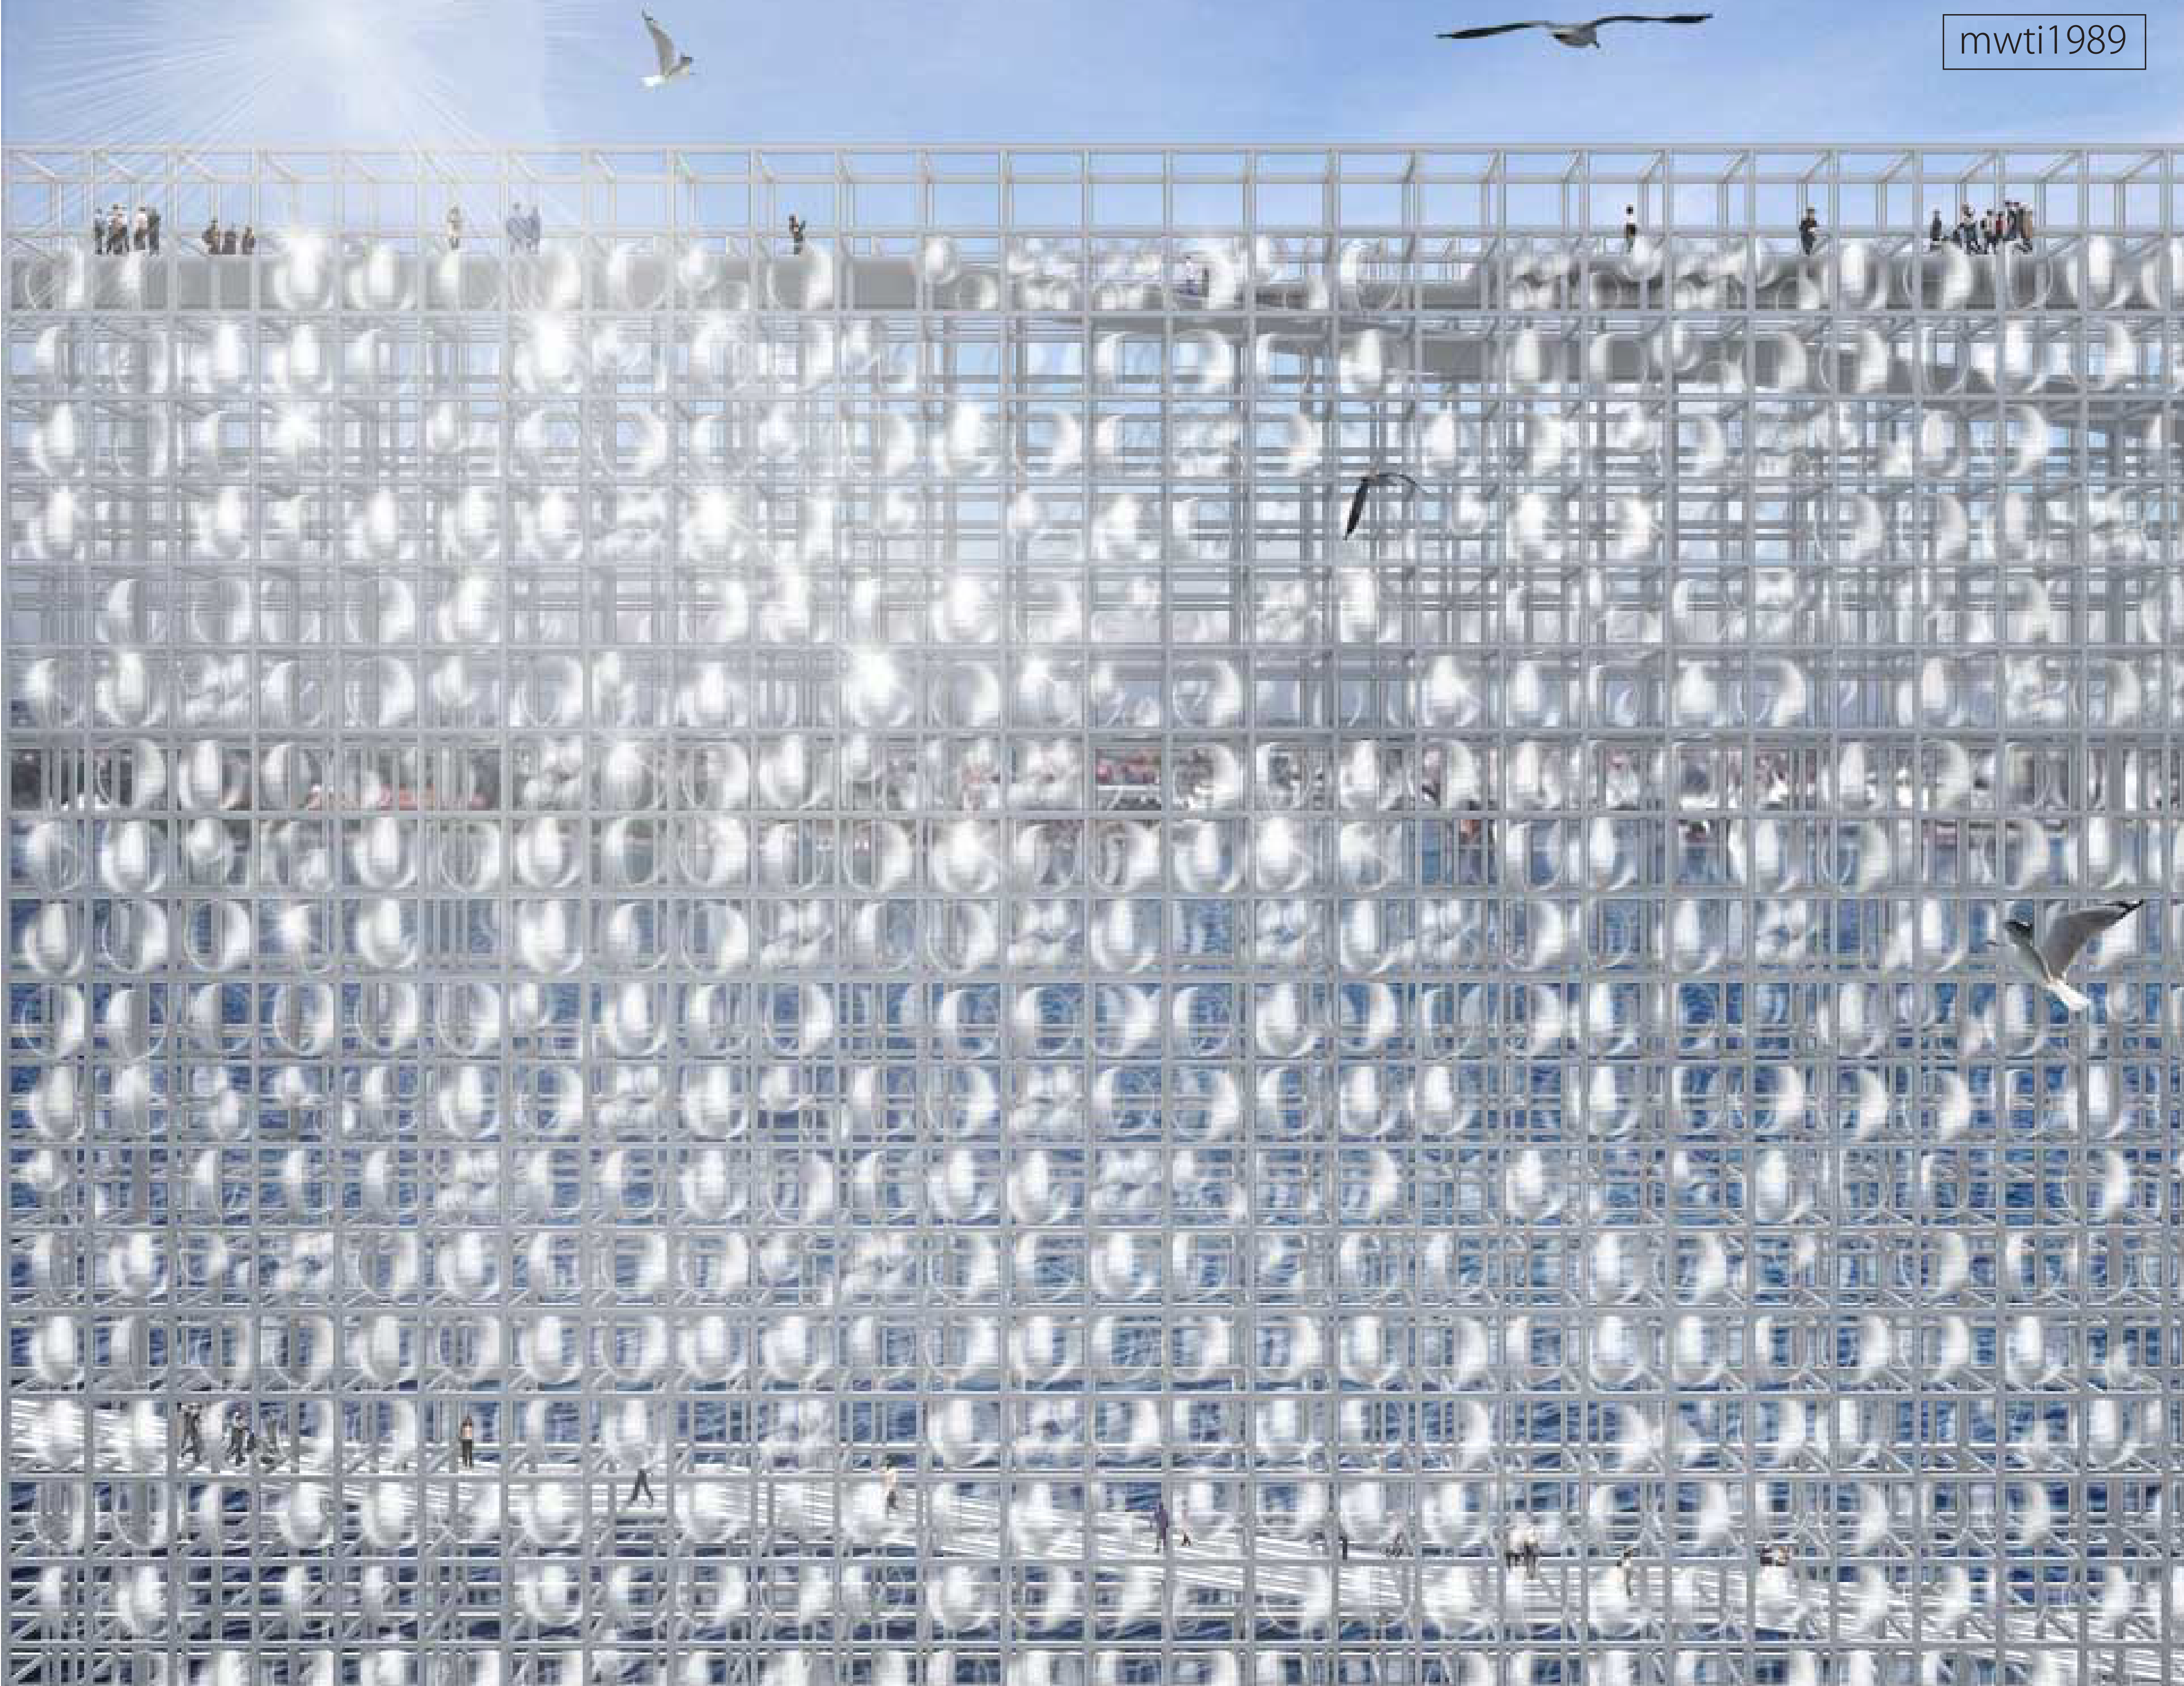

A family can contribute a Small size windmill for the future of Copenhagen. The contribution by the company which gears up on environment shows the status of the company by many Large size windmill placed on the tower. It can be easily seen from the opposite shore that the frame of 100m cube is raised slowly from the bottom.

In 2025, the tower which received everybody's thought and has grown will be completed at last. Absolutely, for the citizen who has watched growth, this tower become a symbol of Copenhagen.

Donation Program

The units gradually filled by sphere windmill contributed by citizen.

It shines night according to a production of electricity, and a windy day shines strongly faintly the weak day of a wind.
