

GRAVITY GAME

The Game of Gravity starts with a single module of stone ball which moves up and down after springing action received from the compressed spring concave cylinder, the stone comes down with the help of gravitational force.

As this action keeps progressing the crank shaft rotates the turbine to produce electricity.

There are 25 modules one above the other in a single pier. These piers are transparent and the movement of the stone balls gives a pleasant view for the visitors.

The Piers are connected with flexible photovoltaic screens, which captures the solar energy and also the wind energy.

X 80 piers
